# Raw dataset

## Indicators (5 656 458 × 6)

Country name	Country code	Indicator name	Indicator code	Year	Value
--------------	--------------	----------------	----------------	------	-------

## Country (247 × 31)

Country code	Short name	Table name	Long name	Alpha 2 code
Currency unit	Special notes	Region	Indice group	etc...

## Country notes (4 857 × 3)

Country code	Series code	Description
--------------	-------------	-------------

## Series (1 345 × 20)

Series code	Topic	Indicator name	Short definition
Long definition	Unit of measure	Periodicity	etc...

## Series notes (369 × 3)

Series code	Year	Description
-------------	------	-------------

# Examples of indicators

	CountryName	CountryCode	IndicatorName	IndicatorCode	Year	Value
4934459	Italy	ITA	GDP per capita (current US\$)	NY.GDP.PCAP.CD	2010	3.587787e+04
4934460	Italy	ITA	GDP per capita growth (annual %)	NY.GDP.PCAP.KD.ZG	2010	1.398210e+00
⋮	⋮	⋮	⋮	⋮	⋮	⋮
5617698	Russian Federation	RUS	Exports of goods and services (current US\$)	NE.EXP.GNFS.CD	2014	5.585801e+11
5617692	Russian Federation	RUS	Exports of goods and services (% of GDP)	NE.EXP.GNFS.ZS	2014	3.002154e+01

	CountryName	Access to electricity (% of population)	Agricultural land (sq. km)	Net income from abroad (current US\$)	Urban population	...
1	Canada	100.00000	677680	-21448405896	21282904	
2	Cuba	92.86102	67410	-610497598	7763439	
3	Italy	100.00000	168400	-15262429218	37846480	
4	Japan.	100.00000	56930	20113271442	95542280	
5	Mongolia	79.81566	1256560	-43600000	1245683	

Looking at *Indicators* as a 3D matrix leads to some problems

- **Years** → not homogeneous

Looking at *Indicators* as a 3D matrix leads to some problems

- **Years** → not homogeneous
- **Countries** → small ones

Looking at *Indicators* as a 3D matrix leads to some problems

- **Years** → not homogeneous
- **Countries** → small ones
- **Indicators** → too varied to choose easily

## Number of observations is not homogeneous

Increasing in the years, dropping in the very last due to the difficulty to find recent data

For each year, an indicator is counted multiple times if present for multiple countries

### Three different countries behaviour

USA are normal, San Marino is small, Afghanistan is problematic

Country — Afghanistan — San Marino — USA

## Number of indicators for each supertopic

Prevalence of economic indicators: great for our analysis

The supertopic is not present in the raw dataset but comes naturally from the topic.  
(e.g. topic = Infrastructure: Transportation, supertopic = Infrastructure)

## Number of indicators for each supertopic

Prevalence of economic indicators: great for our analysis

The supertopic is not present in the raw dataset but comes naturally from the topic.  
(e.g. topic = Infrastructure: Transportation, supertopic = Infrastructure)

An intermediate goal:  
Extract a full matrix with meaningful indicators to perform PCA

## 1. Fix the best year: 2010

Put aside the year dependency for simplicity

## 2. Shrink the countries with too few indicators

Threshold set at 400 indicators, in red the countries out, in green the countries in

The threshold was set in order not to exclude the first significant country: Libya

### 3. Select the indicators among the fullest

Look at the indicators manually and select the most significant

### 3. Select the indicators among the fullest

Look at the indicators manually and select the most significant

## Next steps:

### 4. Evaluate the fullness of the matrix

## Next steps:

4. Evaluate the fullness of the matrix
5. If problematic countries or indicators are still present, consider shrinking them

## Next steps:

4. Evaluate the fullness of the matrix
5. If problematic countries or indicators are still present, consider shrinking them
6. Fill the *real* missing data (via interpolation, value at the previous year or manually from the source)

## Next steps:

4. Evaluate the fullness of the matrix
5. If problematic countries or indicators are still present, consider shrinking them
6. Fill the *real* missing data (via interpolation, value at the previous year or manually from the source)
7. Expand the shrunk matrix over years

# Example 1

GDP per capita (current US\$) in 2013

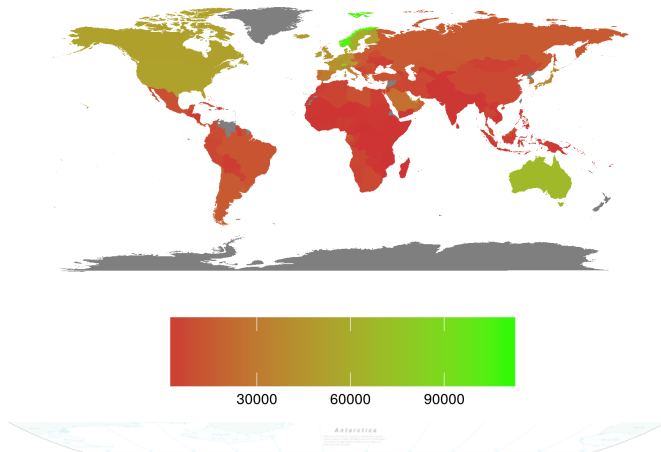

Рис.: GDP per capita, 2013

## Example 2

Population ages 65 and above (% of total) in 2010

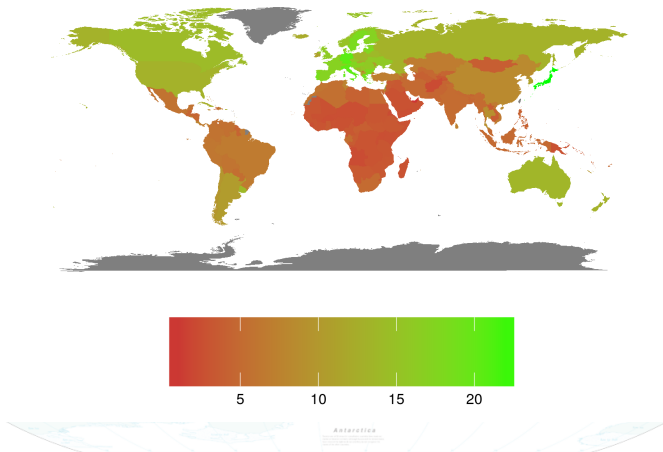

Рис.: Population aged over 65

## Example 3

Unemployment Rates (2013)

Рис.: World unemployment
